

KJG PREMIUM CORNER

The KJG Premium corners are a masterpiece. They make it easier for tinsmiths to work without the use of rivets. Thanks to the narrowed bead with a groove, the corner can be easily slid into the gutter. The squareness of the corner guarantees perfect installation accuracy and the rear bend prevents any water overflow.

The material thickness is equal and keeps the corner rigid but flexible.

MASTERFULL ADVANTAGES

- PREMIUM DESIGN
- INSTALLATION WITHOUT THE USE OF RIVETS
- HIGH QUALITY
- EASY INSTALLATION
- PERFECT CONNECTION
- MANUFACTURED ACCORDING TO STANDARDS
- AVAILABLE IN SIZES
250, 280, 333, 400 mm

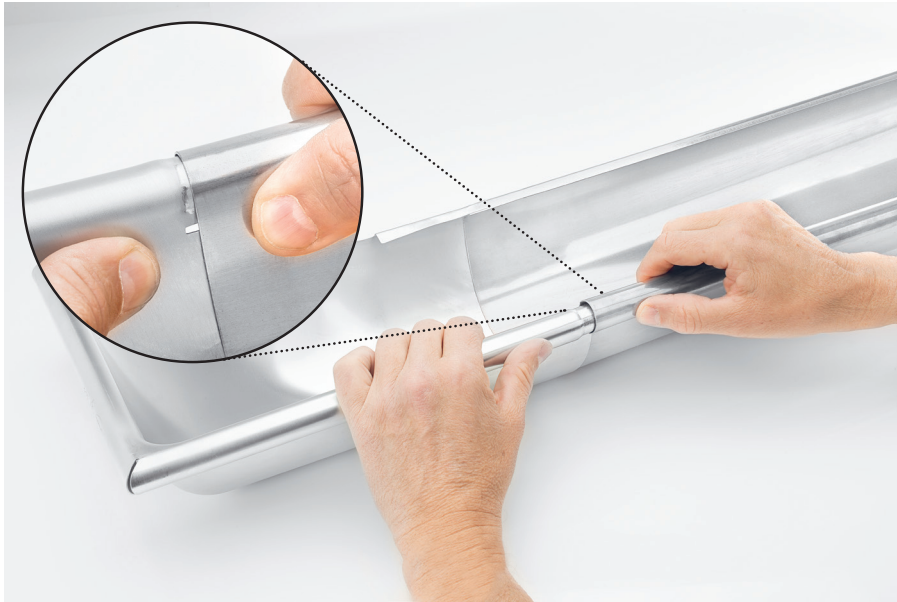

ACCESSIBLE IN MATERIAL

■ Titanium zinc

PREPARING

- Galvanized steel
- Galvanized steel prepainted
- Aluminium
- Aluminium prepainted
- Aluminium prepainted W.15
- Copper
- Stainless steel

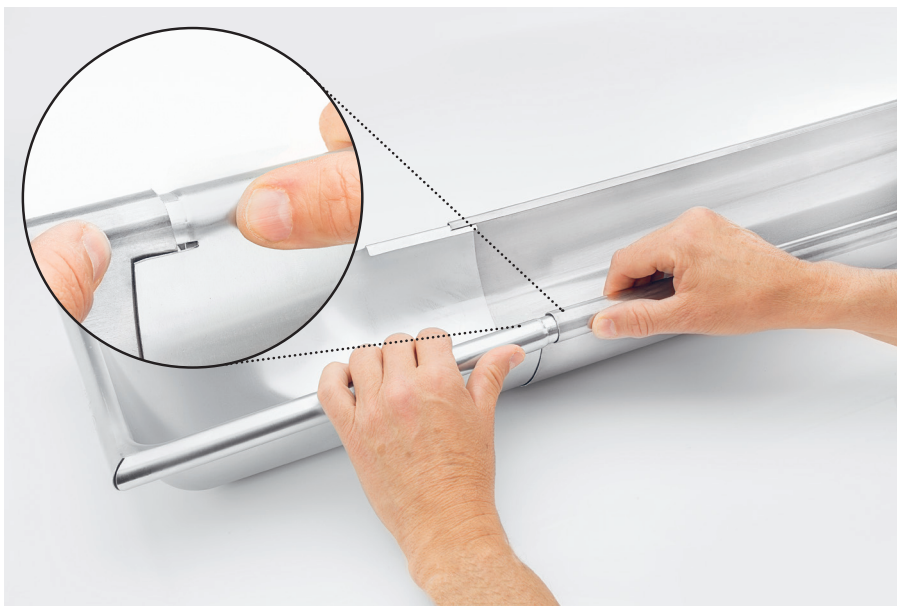

1st INSTALLATION METHOD

Easy for one side

To make rainwater perfect flowed through the gutter in the direction of water flow, the corner shall be slided under the gutter (from outside) on one side by inserting the gutter into the narrowed part of the bead with groove. When the first method used, the groove in the narrowed part of the corner bead will not be visible.

2nd INSTALLATION METHOD

Easy for the second side

On the other side the corner shall be slides over the gutter (from inside) on one side by inserting the gutter into the narrowed part of the bead with groove. When the second method used, the groove in the narrowed part of the corner bead will be visible.
